Master Shin's Power Taekwondo Center

Master Shin's Power Taekwondo Center has been offering instruction in AUTHENTIC TAEKWONDO in Northern Virginia since 2001, and we are so happy to bring this amazing program to Lees Corner for Spring 2023. Master Shin will work on physical fitness and TKD fundamentals for a fun after school activity that also relieves stress and promotes health. All students aged K-6 are welcome. Please dress in comfortable clothing that will let you move freely.

Scholarships and financial assistance available; please contact Lees Corner PTA,

lcsafterschoolenrichment@gmail.com

Spring 2023 | Intro to Game Design:

Intro to Game Design introduces students to important game design design concepts so they may use their creativity and problem-solving skills to create fun, complete and shareable games! The course teaches students important factors they need to consider when creating a game, such as game mechanics, player experience, art, story and how to work within your scope. Via discussions, activities and computer work lead by our instructors, students will learn how to make games from beginning

to end. At the end of the session, students will leave with their own account information, so they may continue developing games at home and sharing them with friends and family.

Registration is Open!

Please go to **stemexcel.org/leescorner** to register.

About the Computer & Coding Club program:

The program aims to align STEM education through beginner to advanced computer science and coding opportunities to build a community Computer & Coding Club. In subsequent enrichment sessions this year and going forward, Game Design, Website Design, Java, Python, Electronics, Robotics, 3D Printing and Minecraft Programming opportunities may be offered per PTA feedback.

About STEM exCEL:

STEM exCEL guides and mentors students to obtain a foundation in computer science and coding so they may excel in Science, Technology, Engineering and Mathematics (STEM). We provide young students a positive introduction to STEM topics, the way they already are introduced to music, sports, art and their core curriculum at school. Whether or not students go on to work in a computer programming field, they will have beneficial confidence and a sense of purpose to act and converse in computational universal languages.
